

ASHISH KUMAR GUPTA
Senior Staff Engineer | Distributed Systems & Cloud Architecture

Pune, India | ashishkr Gupta@hotmail.com | +91 7208769992 | linkedin.com/in/ashish-kumar-gupta-9a183525

PROFESSIONAL SUMMARY

Senior Staff Engineer with 13+ years driving architecture and delivery of distributed systems processing 1M–5M events/day at sub-second latency. Proven owner of critical microservices infrastructure across cybersecurity (SIEM/SOAR), fintech, and cloud-native domains. Expertise in system design, event-driven architecture, and platform engineering using Java, Spring Boot, Apache Kafka, Kubernetes, and AWS. Mentor high-performing teams; evangelist for infrastructure-as-code and AI-assisted development.

TECHNICAL SKILLS

Distributed Systems & Architecture: Microservices, Event-Driven Architecture, System Design, Low-Latency Systems, CQRS, Event Sourcing

Languages & Frameworks: Java (Core & J2EE), Python, JavaScript, Spring Boot, Spring Cloud, Spring MVC, FastAPI, Flask, Hibernate

Messaging & Data: Apache Kafka, Redis, PostgreSQL, MySQL, MongoDB, Cassandra, Elasticsearch, Oracle

Cloud & DevOps: AWS (S3, EC2, RDS, Airflow), Kubernetes, Docker, Jenkins, CI/CD, PCF

Observability & Tools: Elasticsearch, Kibana, Lens, IntelliJ IDEA, DBeaver, Linux (Ubuntu, Mint)

AI & Productivity: Amazon Q, ChatGPT, Claude (code generation, debugging, technical documentation)

PROFESSIONAL EXPERIENCE

Senior Staff Engineer | Securonix India, Pune | Nov 2020 – Present

Lead backend architecture and delivery of Security Orchestration, Automation & Response (SOAR) platform used by 500+ enterprise security teams across 13 countries. Engineer mission-critical microservices processing 1M–5M security events/day at sub-second latency under peak load.

- Architected event-driven microservices using Apache Kafka and Spring Boot; optimized throughput to reliably handle 1M–5M events/day with <1s latency, reducing alert response time by 40% for downstream security teams.
- Engineered Redis caching layer reducing API response times from 500ms to <100ms (5x improvement), decreasing database read load by 60% under high-concurrency workloads (10K+ concurrent requests).
- Deployed containerized services on Kubernetes and AWS; streamlined CI/CD pipelines with Jenkins reducing deployment time from 2+ hours to <15 minutes, enabling rapid security patch deployment.
- Designed and orchestrated 90+ SOAR connectors and integrations (vendor plugins, APIs) enabling security engineers to build complex automation playbooks without manual infrastructure provisioning.
- Published scnx-soar-integration-starter (Python SDK) providing standardized scaffold for connector developers, reducing integration onboarding time from 4 weeks to <3 days.
- Designed and deployed FastAPI microservice gateway enabling seamless invocation of external security connectors within SOAR workflows; eliminated manual connector-specific infrastructure setup, reducing operational overhead.
- Mentored team of 8+ engineers on microservices patterns, system design, and cloud-native best practices; conducted architecture reviews and code walkthroughs raising code quality standards.
- Leveraged AI tools (Amazon Q, ChatGPT, Claude) to accelerate development velocity: automated unit test scaffolding, debugged complex microservice interactions, generated technical documentation, reducing development cycle time by 25%.
- Actively developing agentic systems using agent frameworks and agentic-mesh patterns; architecting orchestrator layer enabling autonomous agents to coordinate multi-step security workflows across distributed SOAR infrastructure.

Officer, Software Engineer | Citicorp Services India, Pune | Sep 2018 – Nov 2020

Engineered Reference Data Hub (RDH), centralized master data platform consolidating financial reference data across Citi's global infrastructure, serving 5–10 downstream systems (trading, risk, operations).

- Built high-throughput data ingestion pipelines (Spring Boot, Elasticsearch) processing 10K+ reference data updates/day; enabled real-time analytics and monitoring dashboards via Kibana, reducing data quality incident resolution time from 4+ hours to <15 minutes.
- Exposed REST APIs (OpenAPI-documented) serving reference data to 5–10 downstream systems; implemented request caching and response pagination, maintaining <200ms p95 latency under 500 req/sec throughput.
- Delivered React-based UI components and internal operational dashboards; managed Oracle DB-backed production services, ensuring 99.8% uptime SLA.

Senior Associate, Software Engineer | Synechron Inc, Pune | *Jul 2017 – Sep 2018*

Architected Transaction Interface Gateway (TIG) middleware for HSBC enabling real-time order placement and data synchronization between Bloomberg and HSBC trading systems.

- Built RESTful microservices (Spring Boot, MongoDB) deployed on Pivotal Cloud Foundry (PCF); handled 500+ concurrent traders executing 5K+ daily transactions with <500ms order confirmation latency.
- Developed Angular frontend for live stock position tracking and cash-balance monitoring, enabling traders to make split-second execution decisions.
- Participated in design reviews and code walkthroughs; improved code review rigor reducing post-release defects by 35% across team.

Associate, Java Developer | Cognizant Technology Solutions, Mumbai | *May 2016 – Jul 2017*

Architected multi-country Tax Computation Engine supporting tax initiation, approval, and payment workflows across 13 countries (Thailand, China, Hong Kong, India, Malaysia, Singapore, and others).

- Implemented Mule ESB-based integrations and Drools rule engines; persisted configuration data in Cassandra DB; ensured secure XML data transmission via IBM MQ/ActiveMQ, maintaining 99.9% message delivery guarantee.
- Collaborated with business analysts translating complex, country-specific tax regulations into configurable Drools rule sets; eliminated manual tax calculation overhead reducing processing time by 50%.
- Ensured compliance with local tax authority requirements across all 13 countries; zero audit failures in production.

Java Developer | Cylsys Software Solutions, Mumbai | *Mar 2013 – Apr 2016*

Built full-stack CRM platforms (R-Square and R-Qube) serving 100+ real estate clients; managed property listings and sales lifecycle workflows for 5K+ property inventories.

- Developed full-stack features using Java, Spring, Hibernate, AngularJS, JSP, Apache Solr, and MySQL; reduced property search latency from 3+ seconds to <500ms via Solr-based faceted indexing and caching.
- Delivered features supporting end-to-end sales lifecycle: lead management, property viewing scheduling, offer management, and transaction closure across multiple user roles (brokers, agents, buyers).

OPEN SOURCE & PUBLICATIONS

- **scnx-soar-integration-starter** (PyPI Package) — Python SDK providing standardized scaffold for building SOAR integrations on Securonix platform. Enables rapid development and deployment of security connectors, reducing time-to-integration from 4 weeks to <3 days.

EDUCATION

Master of Computer Applications (MCA) | 2013 | The Oxford College of Engineering, Bangalore

Bachelor of Computer Applications (BCA) | 2010 | Rajarshi School of Management & Technology, Uttar Pradesh
